

Man Dynamic Income

Monthly summary report: 31 March 2025 Reporting Class: D USD -> DYV USD (04/06/2024)

Investment Policy

Investment Objective

The Fund's investment objective is to provide income and capital growth over a medium to long-term period by investing predominantly in bonds issued by companies and governments worldwide. The Investment Manager seeks to achieve the objective principally using a bottom-up investment approach. The principal risks considered are credit losses (in an event of default) and duration.

Type of Assets

The Fund will invest in corporate and securitised bonds, which may be fixed, or floating rate issued by governments, government agencies and supra-nationals worldwide. The Fund may also invest in other transferable securities, money market instruments, bonds convertible into common stock, mortgage backed securities, including both agency and non-agency MBS, and asset backed securities, including collateralised loan obligations and collateralised mortgage obligations and other fixed income and equity linked investments, namely the financial derivative instruments.

Benchmark Degree of Freedom

The Fund is actively managed; no benchmark is used as a universe for selection or for performance comparison purposes.

Please refer to the Fund's Prospectus /Offering documents for additional details regarding the Fund policy.

Fund Risks

The value of your investment and the income from it may rise as well as fall and you may not get back the amount originally invested. Prior to investing in the Fund investors should carefully consider the risks associated with investing, whether the Fund suits their investment requirements and whether they have sufficient resources to bear any losses which may result from an investment in the Fund. **Investors should only invest if they understand the terms on which the Fund is offered. Investors should consider the risks detailed in the risk glossary and where appropriate seek professional advice before investing.**

Management Company	Man Asset Management (Ireland) Limited

¹ Please note all performance statistics are based on the lead reporting shareclass. Performance data is shown net of fees with income reinvested, and does not take into account sales and redemption charges where such costs are applicable. Returns are calculated net of management fees and any applicable performance fees. Other share classes may charge higher fees.

² Fund Size represents the combined AUM of all share-classes noted in the NAV table.

³ Sharpe ratio is calculated using a risk-free rate in the appropriate currency over the period analysed. Where an investment has underperformed the risk-free rate, the Sharpe ratio will be negative. Because the Sharpe ratio is an absolute measure of risk-adjusted return, negative Sharpe ratios are not shown as they can be misleading.

⁴ Please note, all breakdowns show net positions and exclude; Bond & Equity Futures, Inflation & Interest Rate Swaps, Currency, Forward FX, Repos and Duration & Cash Management Instruments.

⁵ Credit rating is determined by the Investment Adviser using the highest rating ascribed by relevant credit rating agencies (Moody's/S&P/Fitch), or, where no such ratings are available, using its own internal rating.

⁶ Duration Risk Management includes bond futures, interest rate swaps, total return swaps and government bonds issued by the UK, US, France or Germany. Short term government bonds not classified as Duration Risk management will be classified as Cash management. CDS Index positions are classified as Credit risk Management and Single name CDS positions are classified as Single-Name derivatives.

⁷ The organisations and/or financial instruments mentioned are for reference purposes only. The content of this material should not be construed as a recommendation for their purchase or sale.

⁸ The credit rating shown represents the rating with the largest aggregate exposure at issuer level held by the fund. The Fund may also hold securities which have been assigned a different credit rating to that shown above.

Please note, forward FX and currency positions have been excluded.

⁹ The share class in blue in the table is the reporting share class for the Fund and may be closed to new subscriptions.

¹⁰ Ongoing Charges Figure ('OCF'): A variable charge payable over a year, normally based on expenses to the Fund as of the previous accounting year. It excludes Performance Fees (if applicable) but includes the Management Fee.

¹¹ Performance Fee (up to): The payment made to an Investment Manager if certain performance levels are achieved (often over and above any levels set out in the investment objective) within a set time period.

Risk Glossary

Investment Objective Risk - There is no guarantee that the Fund will achieve its investment objective.

Market Risk - The Fund is subject to normal market fluctuations and the risks associated with investing in international securities markets. Therefore, the value of your investment and the income from it may rise as well as fall and you may not get back the amount originally invested.

Counterparty Risk - The Fund will be exposed to credit risk on counterparties with which it trades in relation to on-exchange traded instruments such as futures and options and where applicable, 'over-the-counter' ("OTC", "non-exchange") transactions. OTC instruments may also be less liquid and are not afforded the same protections that may apply to participants trading instruments on an organised exchange.

Currency Risk - The value of investments designated in another currency may rise and fall due to exchange rate fluctuations. Adverse movements in currency exchange rates may result in a decrease in return and a loss of capital. It may not be possible or practicable to successfully hedge against the currency risk exposure in all circumstances.

Liquidity Risk - The Fund may make investments or hold trading positions in markets that are volatile and which may become illiquid. Timely and cost efficient sale of trading positions can be impaired by decreased trading volume and/or increased price volatility.

Financial Derivatives Instruments - The Fund will invest financial derivative instruments ("FDI") (instruments whose prices are dependent on one or more underlying asset) to achieve its investment objective. The use of FDI involves additional risks such as high sensitivity to price movements of the asset on which it is based. The extensive use of FDI may significantly multiply the gains or losses.

Leverage Risk - The Fund's use of FDI may result in increased leverage which may lead to significant losses.

Total Return - Whilst the Fund aims to provide capital growth, a positive return is not guaranteed over any time period and capital is in fact at risk.

Emerging Markets - The Fund may invest a significant proportion of its assets in securities with exposure to emerging markets which involve additional risks relating to matters such as the illiquidity of securities and the potentially volatile nature of markets not typically associated with investing in other more established economies or markets.

Non-Investment Grade Securities - The Fund may invest a significant proportion of its assets in non-investment grade securities (such as "high yield" securities) are considered higher risk investments that may cause income and principal losses for the Fund. They are instruments which credit agencies have given a rating which indicates a higher risk of default. The market values for high yield bonds and other instruments tend to be volatile and they are less liquid than investment grade securities.

Glossary

Accumulating shares - Shares in a collective investment scheme where any income is automatically reinvested into the scheme

Annualised Return - An annualised total return is an average amount of money earned by an investment each year over a given time period. It is calculated to show what an investor would earn over a period of time if the annual return was compounded.

Annualised Volatility - Volatility is the rate and extent at which the price of a portfolio, security or index, moves up and down. If the price swings up and down with large movements, it has high volatility. If the price moves more slowly and to a lesser extent, it has lower volatility. It is used as a measure of the riskiness of an investment. Annualised volatility is an average annual amount of volatility over a given time period.

Beta - A measure of how sensitive an investment portfolio is to market movements. The sign of the beta (+/-) indicates whether, on average, the portfolio's returns move in line with (+), or in the opposite direction (-), to the market. The market has a beta of 1. If the portfolio has a beta of less (more) than 1, it means that the security is theoretically less (more) volatile than the market.

Bond - Investment securities where an investor lends money to a company or a government for a set period of time, in exchange for regular interest. A loan in the form of a security, usually issued by a government or company. It normally pays a fixed rate of interest (also known as a coupon) over a given time period, at the end of which the initial amount borrowed is repaid.

Correlation - A measure of the interdependence or strength of the relationship between two investments. A correlation of 1 means that the two investments are perfectly synchronised, -1 implies that they move in symmetrically opposite directions and 0 means no relationship between them.

Credit Rating (quality) - A score awarded by S&P, Moody's or Fitch to indicate the financial strength of the issuer of a bond, and the potential for a default on interest and principal payments. For example, according to the S&P rating scheme the top credit rating is 'AAA'. The lowest rating to be considered 'investment grade' is 'BBB-'. Below 'BBB-', bonds are termed 'sub investment grade' or 'high yield'. If more than one rating agency awards a score, the lowest score will be chosen. If no official score is awarded by S&P, Moody's or Fitch the portfolio manager assigns an internal estimate.

Delta/Equity Sensitivity - Delta is the ratio comparing the change in the price of the underlying asset to the corresponding change in the price of a derivative. For example, if an equity option has a delta value of 0.65, this means that if the underlying stock increases in price by £1, the option will rise by £0.65, all else equal.

Distribution Yield - The distribution yield reflects the amounts that may be expected to be distributed over the next twelve months as a percentage of the fund's net asset value per share as at the date shown, and may be estimated. It does not include any initial charge and investors may be subject to tax on distributions.

Duration - Expressed in years and measures the sensitivity of a bond's price to a change in interest rates. There is an inverse relationship between bond prices and interest rates.

Entry Charge - The entry charge shown is a maximum figure and in some cases you might pay less. Please refer to your financial advisor or the distributor for the actual charges.

Expected Life - Bonds with embedded options may be exercised prior to maturity, therefore the term may be shorter than the maturity of the underlying bonds. The issuer / holder may choose to call or put the bond respectively during the market cycle as interest rates fluctuate. Issuers may wish to exercise callable bonds in order to lock in a lower rate of borrowing (reducing the cost of capital) or a holder of a puttable bond may exercise in order to invest in higher yielding issuance. Expected life takes account of bonds with embedded options and is the expected time before the embedded option is exercised.

Exposure - This refers to the part of a portfolio that is subject to the price movements of a specific security, sector, market or economic variable. It is typically expressed as a percentage of the total portfolio, e.g. the portfolio has 10% exposure to the mining sector.

Floating rate notes - Securities whose interest (income) payments are periodically adjusted depending on the change in a reference interest rate.

Futures - Derivative financial contracts that obligate parties to buy or sell an asset at a predetermined future date and price.

FX Forward - An FX forward contract is an agreement to purchase or sell a set amount of a foreign currency at a specified price for settlement at a predetermined time in the future.

Gilts - Fixed income securities issued by the UK government. They are called gilts because they used to be issued on gilt-edged paper.

Gross Exposure Rescaled - If the portfolio has a gross exposure of 120% we may in some circumstances rescale this to equal 100% for sector or country breakdowns. For example, if United States Gross exposure is 40% of the 120% in the fund, the rescaled gross exposure would be $(40\%/120\%)*100\%$ which would be 33% so the United States makes up 33% of the total gross exposure when rescaled.

Hedge/hedging - A method of reducing unnecessary or unintended risk.

Information Ratio - A ratio of portfolio returns above the excess returns of a benchmark (usually an index) to the volatility of those returns. The ratio measures a portfolio manager's ability to generate excess returns relative to a benchmark. Volatility is measured using tracking error.

Investment grade government and corporate bonds - Bonds that are believed to have a lower risk of default and receive higher ratings by the credit rating agencies.

Leverage - When referring to a company, leverage is the level of a company's debt in relation to its assets. A company with significantly more debt than capital is considered to be leveraged. It can also refer to a fund that borrows money or uses derivatives to magnify an investment position.

Life to Optimal - This is expected life of a bond taking embedded options into account, therefore showing the date at which the optimum yield would be achieved.

Long Position - A security that is bought in expectation that it will rise in value.

Maturity - Maturity is the length of time before a financial instrument ends, after which it must either be renewed or it will cease to exist.

Money market instruments - Financial instruments which are normally dealt in on the money market, such as treasury bills, certificates of deposit and commercial papers and excluding instruments of payment

NAV - The Net Asset Value (NAV) represents the value per share. It is calculated by dividing the total net asset value of the fund (the value of the fund's assets less its liabilities) by the number of shares outstanding.

Ongoing Charge Figure (OCF) - The OCF is estimated and based on expenses and may vary from year to year. It includes management fees but excludes performance fees (where applicable) and portfolio transaction costs, except in the case of an entry/exit charge paid by the Fund when buying or selling units in another sub-fund. The charges you pay are used to pay the costs of running the Fund, including the costs of marketing and distributing it. These charges reduce the potential growth of your investment.

Options - Financial contracts that offer the right, but not the obligation, to buy or sell an asset at a given price on or before a given date in the future.

Overweight/Underweight - Refers to a fund's position in line with its chosen reference index. Overweight means a fund holds more of a certain security than the reference index and underweight means a fund holds less of a certain security compared to its reference index.

Performance Fee - The payment made to an Investment Manager if certain performance levels are achieved (often over and above any levels set out in the investment objective) within a set time period. Please refer to the fund's prospectus for a complete description.

Position Concentration - The proportion of a portfolio's net asset value represented by the largest (e.g. 5/10/20) positions.

Preference shares - Preference shares are different from ordinary shares, in that their owners are given certain 'preferred' rights compared to the ordinary shares. The rights attaching to the shares in the company will be set out in the company's articles of association

Redemption Fee - This is the maximum that might be taken out of your money before the proceeds of your investment are paid out.

Reference index - This is not an official benchmark and is used as a comparison unofficially.

Running Yield - At security level, running yield is the annual income on an investment divided by its current market value. At fund level, it is a weighted average of the contributing securities, based on absolute weights.

Sector (i) - A sector is an area of the economy in which businesses share the same or a related product or service. It can also be thought of as an industry or market that shares common operating characteristics. Dividing an economy into different pieces allows for more in-depth analysis of the economy as a whole.

Sector (ii) - A peer group of funds which have a similar investment objective or invest in the same type of assets. These are organised by independent companies such as the Investment Management Association in the UK. The average performance of a sector is often used to compare with the performance of an individual fund in the sector.

Share class - Type of fund shares held by investors in a fund (share classes differ by levels of charge and/or by other features such as hedging against currency risk). Each has a different level of charges and minimum investment.

Sharpe Ratio - The Sharpe Ratio is a measure for calculating risk-adjusted return, and has become the industry standard for such calculations. The Sharpe

Ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. The higher the ratio the better, with a number greater than 1 usually considered good, a number greater than 2 considered very good and a ratio of 3 or higher considered excellent. As it is an absolute measure of risk-adjusted return, negative Sharpe Ratios can be misleading and are therefore shown as N/A.

Short Position - Fund managers use this technique to borrow a security and then sell it with the intention of buying it back for less when the price falls. The position profits if the security falls in value. Within UCITS funds, derivatives – such as contracts for difference (CFDs) – can be used to simulate a short position.

Tracking Error - Tracking error is a measure of the divergence between a portfolio's returns and the benchmark or index against which it is managed.

UCITS - Stands for Undertakings for Collective Investments in Transferable Securities. This is the European regulatory framework for an investment vehicle that can be marketed across the European Union and is designed to enhance protections for Retail Investors.

Yield to Maturity - Yield to maturity (YTM) is the total return anticipated on a bond if the bond is held until the end of its lifetime. Yield to maturity is considered a long-term bond yield expressed as an annual rate, coupons are assumed to be reinvested at the same rate. This takes into account the change in yield should the issuer have the desire and the ability to retire the debt prior to maturity.

Yield to Optimal - Yield to optimal tries to capture the most likely outcome of the conversion feature of the convertible bond. Therefore, if the conversion value of the convertible bond is higher than the repay price the yield to optimal is represented by the current yield, otherwise it is treated as a bond like instrument and the yield to optimal is represented by the maximum of the yield to maturity or yield to put.

YTD - Year-to-date.

Important information

This material is being provided for information and discussion purposes only and is qualified in its entirety by the information included in the confidential offering documents (collectively, the "Offering Documents") of each private investment fund (a "Fund") described herein, and is not intended to be, nor should it be, construed or used as investment, tax or legal advice or an offer to sell, or a solicitation of an offer to buy, an interest in a Fund. Any offer or solicitation of an investment in a Fund may be made only by delivery of such Fund's Offering Documents to qualified investors. An investment in a Fund is not suitable for all investors. Alternative investments and privately-offered investment vehicles can involve significant risks and the value of a Fund may go up or down. Before making any investment in a Fund, you should thoroughly review the Offering Documents with your professional advisor(s) to determine whether an investment in a Fund is suitable for you in light of your investment objectives and financial situation. Benchmarks and financial indices are shown for illustrative purposes only, may not be available for direct investment, are unmanaged, assume reinvestment of income, do not reflect the impact of any management incentive fees and have limitations when used for comparison or other purposes because they may have different volatility or other material characteristics (such as number and types of instrument s). The Fund's investments are not restricted to the instruments composing any one index. Certain information is based on data provided by third-party sources and, although believed to be reliable, has not been independently verified and its accuracy or completeness cannot be guaranteed.

This material is intended only for institutional investors, investment professionals, market counterparties or intermediate customers, solely for your information and may not be reproduced or otherwise disseminated in whole or in part without prior written consent. Past performance is no indication or guarantee of future performance Unless otherwise indicated, performance results are net of applicable fees, expenses, presume reinvestment of income and are based on information provided by underlying managers, and all such information since the most recent annual audit is based on estimates provided by underlying managers through the investment manager's most recent mid-month survey of underlying managers and is unaudited and subject to change.

No representation is made that a Fund's risk management, investment process, trading performance or investment objectives will or are likely to be achieved or successful or that any Fund or underlying investment will make any profit or will not sustain losses

ALTERNATIVE INVESTMENT PRODUCT RISKS AND OTHER DISCLOSURES

The alternative investment products described herein are private investment funds (sometimes called "hedge funds"). Private Investment funds managed by Man Investments and/or their respective affiliates (collectively, the "Funds") are unregistered private investment funds or pools that may invest and trade in many different markets, strategies and instruments (including securities, non-securities and derivatives) and are NOT subject to the same regulatory requirements as mutual funds, including mutual fund requirements to provide certain periodic and standardized pricing and valuation information to investors. There are substantial risks in investing in the Funds, which are applicable to the underlying private funds in which the Funds invest, as well as to the Funds. Each Fund's Offering Documents contain important information concerning risk factors, including a more comprehensive description of the risks and other material aspects of the investment (including a Fund's investment program and applicable fees and expenses), and should be read carefully before any decision to invest is made. You should not rely in any way on this summary. This information is qualified in its entirety by the information that would be contained in any or all investment products' governing investment documents or confidential offering documents, including an offering memoranda or managed account agreements, as the case may be (collectively, the "Investment Documents"). Any offer or solicitation of an investment in an investment product may be made only by delivery of an investment product's Investment Documents to qualified investors. You should note carefully the following:

- The Funds represent speculative investments and involve a high degree of risk. An investor could lose all or a substantial portion of his/her investment. Investors must have the financial ability, sophistication/experience and willingness to bear the risks of an investment in a Fund.
- An investment in a Fund should be discretionary capital set aside strictly for speculative purposes.
- An investment in a Fund is not suitable or desirable for all investors. Only qualified eligible investors may invest in the Funds.
- The Funds' offering documents are not reviewed or approved by federal or state regulators.
- The Funds may be leveraged (including highly leveraged) and a Fund's performance may be volatile.
- An investment in a Fund may be illiquid and there may be significant restrictions on transferring interests in a Fund. There is no secondary market for an investor's investment in a Fund and none is expected to develop.
- A Fund may have little or no operating history or performance and may use hypothetical or pro forma performance which may not reflect actual trading done by the manager or advisor and should be reviewed carefully. Investors should not place undue reliance on hypothetical or pro forma performance.
- A Fund's discretionary manager or advisor has total trading authority over such Fund.
- A Fund may use a single advisor or employ a single strategy, which could mean a lack of diversification and higher risk.
- A Fund and its managers or advisors may rely on the trading expertise and experience of third-party managers or advisors, the identity of which may not be disclosed to investors.
- A Fund may involve a complex tax structure, which should be reviewed carefully.
- A Fund may involve structures or strategies that may cause delays in important tax information being sent to investors.
- A Fund may trade commodity interests (directly or indirectly). The risk of loss in trading commodity interests is substantial.

- A Fund may execute a substantial portion of trades on foreign exchanges, which could mean higher risk.
- A Fund's fees and expenses - which may be substantial regardless of any positive return - will offset such Fund's trading profits.
- The Funds are not required to provide periodic pricing or valuation information to investors.
- The Funds and their managers/advisors may be subject to various conflicts of interest. The above summary is not a complete list of the risks, tax considerations and other important disclosures involved in investing in a Private Fund and is subject to the more complete disclosures in such Fund's offering documents, which must be reviewed carefully prior to making an investment.
