

HSBC Global Investment Funds

GLOBAL HIGH INCOME BOND

Monthly report 31 May 2022 | Share class IC

Investment objective

The Fund aims to provide income by investing in a portfolio of higher yielding bonds.

Investment strategy

In normal market conditions, the Fund will primarily invest in bonds and other similar securities issued by governments, government-related entities, supranational entities and companies that are based anywhere in the world. This may include investment Grade bonds, non-investment grade bonds, and Asian and emerging market bonds. The Fund's asset allocation is managed with regard to the following neutral positions. Allocation may match these weights or be overweight and underweight based on the Investment Adviser's assessment of the best allocation to achieve the Fund's investment objective: 35% USD Emerging Market bonds, 20% US based investment grade corporate bonds, 15% US based high yield bonds, 15% Euro denominated investment grade corporate bonds hedged to USD, 15% Euro denominated high yield bonds hedged to USD. The Fund may invest up to 20% in asset-backed securities and mortgage-backed securities. The Fund may invest up to 10% in onshore Chinese bonds which are issued within the People's Republic of China and traded on the China Interbank Bond Market. The Fund may invest up to 10% in convertible bonds, up to 10% in contingent convertible securities and up to 10% in other funds. See the Prospectus for a full description of the investment objectives and derivative usage.

Main risks

- The Fund's unit value can go up as well as down, and any capital invested in the Fund may be at risk.
- The Fund invests in bonds whose value generally falls when interest rates rise. This risk is typically greater the longer the maturity of a bond investment and the higher its credit quality. The issuers of certain bonds, could become unwilling or unable to make payments on their bonds and default. Bonds that are in default may become hard to sell or worthless.
- The Fund may invest in Emerging Markets, these markets are less established, and often more volatile, than developed markets and involve higher risks, particularly market, liquidity and currency risks.

Monthly performance commentary

Market Review

Global credit markets suffered from inflationary pressures, rate volatility, growth concerns and weak technicals in the form of outflows before a late month recovery helped pare losses. In this context, total returns came in close to flat for Investment Grade and moderately negative for High Yield over the month. IG supply came in at \$87 billion, the lightest May since 2012 while HY saw just \$900 million. Flows were negative again for US IG with -\$14.2 billion. Rising rates took a pause in May with the US Treasury curve steepening as shorter end yields fell more than for longer dated bonds over the month. The US 2, 5, 10 and 30 year Treasuries yields moved -16, -14, -9 and +5 bps to end the month at 2.56%, 2.82%, 2.84% and 3.05% respectively. In this context the strategy delivered negative performance on an absolute basis gross of fees. Overall the fund saw negative absolute contributions to return from all asset segment in May. From an asset class perspective Securitized Credit was the hardest hit segment followed by EUR Credit while US Credit and EM performed the best. The EUR segment saw positive relative return vs its investment universe while the US and EM segments saw negative return vs their investment universe over the month. An underweight to duration vs its investment universe was also a drag on performance over the month as rates changed course to finish lower in May. From a sector perspective the fund remains predominantly invested in corporate BBB and BB credit with an allocation to sovereigns at 10% and structured credit at 12%. From a credit perspective the fund has an average credit rating of BBB-/BB+ with 56% investment grade including 5% cash and 44% below investment grade. Regionally, the strategy has exposure to US Credit 28%, EUR Credit 22%, EM 25% and Structured Credit 12%. The 3 top industry sector exposures are to financials, energy and communications. While less attractive at current valuations than they had been, financials still offer solid credit fundamentals given healthy balance sheets as a result of the sectors regulatory scrutiny following the Global Financial Crisis. Communications has increased at the expense of consumer cyclicals due to attractive valuations and its more defensive nature while higher quality energy looks attractive and remains supported by higher oil prices. The current portfolio duration is 0.5 year underweight the investment universe at 5.26 years on an option adjusted basis, with an overweight to the short end and 10+ year segments and underweights to the 2-5 and 5-10 year segments.

Outlook

While a late month recovery rally in May gave credit markets some relief from the widens in corporate bond spreads that were reached earlier in the month, investors remain concerned about inflation, Central Bank hawkishness, weaker corporate earnings, a potential economic slowdown as well as the ability of the Fed to engineer a soft landing. Although credit fundamentals remain solid, even if they have weakened somewhat and with growth concerns now a larger part of the narrative we believe that spreads are more likely to test wider levels than move tighter so despite more attractive valuations we remain cautious. In crossover credit, we are keeping credit beta largely the same as we are now comfortable with current level of high yield following a reduction to the lower rated part of this segment over the past 6 months. At the same time this has created average rating room and more cash which will provide the ability to “bottom-pick” credits when the time is right. As US 10yr yields are now back over 3%, we may look to rotate to a higher investment grade tilt as the duration risk is increasingly priced in, while we see HY spreads having more potential widening possibilities on weaker expected economic outlook. From an industry allocation perspective, we are continuing to incrementally looking at developed market non-cyclical rotations such as packaging and healthcare, while the geographic allocation continues to be overweight asset backed and US credit, and more cautious on emerging markets.

Risk Disclosure

- Derivatives may be used by the Fund, and these can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.
- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- Investment involves risk. Past performance figures shown are not indicative of future performance. Investors should read the prospectus (including the risk warnings) and the product highlights sheets, before investing. Daily price change percentage is based on bid-bid price.

The above table cites the last dividend paid within the last 12 months only.

Dividend is not guaranteed and may be paid out of capital, which will result in capital erosion and reduction in net asset value. A positive distribution yield does not imply a positive return. Past distribution yields and payments do not represent future distribution yields and payments. Historical payments may comprise of distributed income, capital, or both.

The calculation method of annualised yield prior to August 2019 is the simple yield calculation: (dividend amount / NAV per share or units as of ex-dividend date) x n; The calculation method of annualised yield from August 2019 is the compound yield calculation: $((1 + (\text{dividend amount} / \text{ex-dividend NAV}))^n - 1)$, n depends on the distributing frequency. Annually distribution is 1; semi-annually distribution is 2; quarterly distribution is 4; monthly distribution is 12.

The annualised dividend yield is calculated based on the dividend distribution on the relevant date with dividend reinvested, and may be higher or lower than the actual annual dividend yield.

Investors and potential investors should refer to the details on dividend distributions of the Fund, which are available on HSBC Asset Management (Singapore) Limited website.
