

ELEVA Absolute Return Europe - Class A2

28/02/2025
Monthly report

Investment objective and approach

- Aiming to achieve an absolute return over the medium term through capital growth
- Investing primarily in European equities and equity related securities on both a long and short basis
- Differentiated and disciplined bottom up investment philosophy complemented by a macroeconomic overlay to support sector positioning
- Flexible net exposure between -10 and +50% driven by fundamental idea generation and market volatility
- Recommended investment horizon : ≥ 5 years

Monthly Comment

European markets rallied in February helped by better-than-expected results across the board and increased expectations of an end to hostilities in Ukraine. Inflows into European equities helped sustain the outperformance of the asset class. However, an announcement of tariffs for European goods continues to be a possibility. ELEVA Absolute Return Europe was down 0.20% this month.

The long book had a positive impact on performance but materially underperformed the move in relevant indices. Financials, industrials and consumer discretionary were the main drivers of performance. Conversely, the technology, health care and communication services allocations were a drag. The lack of pure play defense names also hindered performance.

Rolls Royce had a very strong set of results and materially upgraded their free cash flow expectations in the short term and also in 2028. **Siemens** also positively surprised on their key Smart Infrastructure division, highlighting a potential turnaround in automation orders after a period of weakness. Banks (**Barclays**, **Commerzbank**, **Intesa San Paolo**) continued to rally with positive comments and upgrades in their capital return expectations. Unfortunately, we were too defensive in our financial allocation (with insufficient exposure) and stock picking was detrimental this month.

BE Semiconductor Industries disappointed on its outlook, with a lack of short-term recovery in its base business despite long term interest in their hybrid bonding solutions. **Capgemini** had disappointing guidance after two average years. **Publicis** delivered good results but was affected by profit warnings from peers.

The short book had a negative impact on performance, with index hedges and single name shorts costing performance. Health care, consumer discretionary and technology were positive drivers of the short book performance. Nevertheless, it was not enough to compensate for the fall in index hedges, financials, communication services and energy.

Economic growth was decent in 2024, with low growth in Europe and in China balanced by an acceleration in the US. Falling inflation expectations reduce the risks of a Central Bank mistake. The macro environment was deteriorating last year, but now we see a modest inflection in Europe and a more material one in the Global and US indicator. Patience is needed in Europe for interest rates to have an impact on economic activity. In that environment we believe that corporates will still be able to grow at a moderate pace.

Value and cyclical in the long book decreased from 48.8% to 48.5% and from 54.5% to 50.2%. Net exposure decreased from 31.7% to 28.3% but gross exposure increased from 152.2% to 154.1%.

Since inception, ELEVA Absolute Return Europe was up 31.66%.
