All performance periods over a year will be annualised. Performance for the I USD Acc share class in USD, launched on 02 February 2022. Source: Lipper. Performance assumes all fund charges have been taken and that all income generated by the investments, after deduction of tax, remains in the fund. This fund has adopted a "swing pricing" methodology, such that the Net Asset Value per Share of the fund may be adjusted upwards or downwards to reflect the costs of dealing in the fund's assets. As the swinging price only affects shareholders which place subscription or redemption instructions, we have used the notional unswung mid-price history in the tables and charts above in order to remove the volatile effect that the swing pricing has on the depiction of past performance of the Fund.

Past performance is not a guide to the future.

Fund returns shown are based on prices as at the last fund trading day for the month. Due to bank holidays this may impact relative performance to any benchmarks which are priced on a bank holiday which falls within a month but after the last fund trading day for that month.

***The benchmark for this fund will have exposures to securities denominated in currencies other than USD which, in the fund, are hedged back to USD at portfolio level. Consequently for this USD share class the benchmark performance shown is USD hedged in order to meaningfully reflect the performance of the share class relative to the fund's benchmark.**

Composite benchmark consists of: 40% blended 50/50 benchmark comprising the JPM EMBI Global Diversified 3-5 Years Index (sovereign) and the JPM CEMBI Diversified 3-5 Years Index (corporate); 40% Bank of America Merrill Lynch Global High Yield BB-B Rated 2% Constrained Ex-Financial Index; and 20% Bloomberg Barclays USD/EUR/GBP Corporates 1% issuer capped.

Please note previous versions of this factsheet showed returns for the USD unhedged benchmark.

PORTFOLIO BREAKDOWN

All data source LGIM unless otherwise stated. Totals may not sum due to rounding. As at 29 December 2022 LGIM has changed strategic data sourcing for LGIM Client Reporting and Factsheets for Active Fixed Income portfolios. This impacts the methodology used to calculate the management information provided in the documentation and may change the observed results. For the avoidance of doubt, these changes have not impacted the investment management of any funds/portfolios.

RISK AND REWARD PROFILE

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as class 6 out of 7, which is a high risk class. This product does not include any protection from future market performance so you could lose some or all of your investment. **Be aware of currency risk.** You may receive payments in a different currency, so the final return you will get depend on the exchange rate between the two currencies. This risk is not considered in the indicator shown above. The Fund is not covered by an investor compensation scheme. The value of the fund may be affected by risks not in the SRI: failure of a counterparty, custodian or issuer; derivative use; inability to sell holdings; trends in interest rates/inflation.

KEY RISKS

- The value of an investment is not guaranteed and can go down as well as up; you may not get back the amount you originally invested.
- This fund invests in countries where investment markets are considered to be less developed. This means that investments are generally riskier than those in developed markets because they: may not be as well regulated; may be more difficult to buy and sell; may have less reliable arrangements for the safekeeping of investments; or may be more exposed to political and taxation uncertainties. The value of the fund can go up or down more often and by larger amounts than funds that invest in developed countries, especially in the short term.
- This fund holds bonds that are traded through agents, brokers or investment banks matching buyers and sellers. This makes the bonds less easy to buy and sell than investments traded on an exchange. In exceptional circumstances the fund may not be able to sell bonds and may defer withdrawals, or suspend dealing. The Directors can only delay paying out if it is in the interests of all investors and with the permission of the fund depositary.
- The fund invests directly or indirectly in bonds which are issued by companies or governments. If these companies or governments experience financial difficulty, they may be unable to pay back some or all of the interest, original investment or other payments that they owe. If this happens, the value of the fund may fall.
- Prices of the Asset-Backed Securities (ABS) and Mortgage-Backed Securities (MBS) may be volatile, and will generally fluctuate due to a variety of factors that are inherently difficult to predict. In addition, the terms of the ABS/MBS may restrict its sale in particular circumstances.
- The fund could lose money if any institution providing services such as acting as counterparty to derivatives or other instruments, becomes unwilling or unable to meet its obligations to the fund.
- Derivatives are highly sensitive to changes in the value of the asset on which they are based and can increase the size of losses and gains. The impact to the fund can be greater where derivatives are used in an extensive or complex way.
- The fund may have underlying investments that are valued in currencies that are different from the currency of this share class. Exchange rate fluctuations will impact the value of your investment. Currency hedging techniques may be applied to reduce this impact but may not entirely eliminate it.
- We may take some or all of the ongoing charges from the fund's capital rather than the fund's income. This increases the amount of income, but it reduces the growth potential and may lead to a fall in the value of the fund.
- Investment returns on bonds are sensitive to trends in interest rate movements. Such changes will affect the value of your investment.
